Cloudwise APM

Vsualization and analysis across entire application delivery chain

2 Cludewise

Code-level, End-to-end APM platform

Cloudwise APM is a landing product that solves business and application performance issues under the new business O&M background. The product analyzes the impact of applications on business from the perspective of external users, focusing on business transaction quality, real user experience, and the performance of backend applications, enabling end-to-end performance problem tracking and diagnosis.

Cloudwise APM can promote the cooperation and synergy of different departments such as business operation, IT O&M, R&D, so as to deal with problems based on a unified perspective, and then ensure the healthy and rapid growth of our clients' business.

Features and Advantages

Mobile App performance analysis

- ✓ App monitoring based on real users
- Real-time monitoring, analysis and diagnosis of APP performance
- ✓ Comprehensive analysis of mobile operation data
- ✓ Reduce user loss and increase user conversion rate

Server-end, code-level application performance analysis

- Multi-platform,multi-language application performance analysis
- ✓ Stack and code-level diagnosis for critical services
- ✓ Database analysis, and SQL slowness and anomaly location

Transaction topology analysis

- ✓ Business transaction statistical analysis
- ✓ End-to-end transaction tracking
- ✓ Quickly locate transaction performance issues

Infrastructure monitoring

- ✓ All round perspective of host performance
- √ Request-oriented performance analysis
- ✓ Integrate mainstream open source monitoring tools

Web performance analysis

- ✓ Monitoring on user behavior of Web application
- ✓ Data analysis on Web element performance
- ✓ Comprehensive analysis on the overall performance of web pages

Application Topology Analysis

- ✓ Automatic discovery of full topology
- Quickly discover performance issues of application components
- ✓ Clearly display of key applications' call process

Full technology stack management

- ✓ Support mobile and smart devices
- ✓ Support end-to-end, highly virtualized applications
- ✓ Support public, private cloud and hybrid cloud

Intelligent operations analysis

- Decision support based on big data
- ✓ Multi-correlational analysis model
- ✓ Ensuring application performance

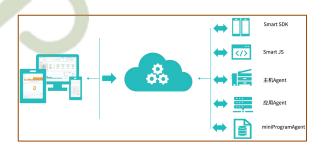

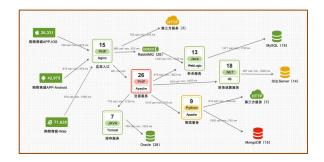

Architecture and Functions

APM system architecture

Business and application typology

Mobile App performance analysis

Users access and experience analysis

Deep code errors and slow SQL tracking

Web full-factor analysis and diagnosis
